Breathing, periodic, as an instability of the respiratory system, mathematical study of, 114:149
Bullfrog atrial trabeculum, idealized, simulations of passive properties and action potential conduction in, 116:127

Cardiac tissue, anisotropic, spreading of excitation in 3-D models of, I. Validation of the eikonal model, 113:145
Chaos in a periodically forced predator–prey ecosystem model, 113:91
Cocontraction of pairs of antagonistic muscles, 118:83
Compartmental masses and transition rates, relationship between, in stochastic compartmental models, 114:59
Compartmental models, stoachastic, relationship between compartmental masses and transition rates in, 114:59
Competition in the chemostat, exploitative, for two perfectly substitutable resources, 118:127
Computer implementation of an age-dependent two-sex demographic model, 118:211
Concentration-flux relations for a multicellular biological membrane with metabolism, 115:103
Concentration profile of a growth inhibitory factor in multicell spheroids, 115:233
Cytomagnetometric measurements, a model of phagosome motion within cells based on, 118:97

"Deterministic simple epidemic" unmasked, 117:147
Deterministic and stochastic models for the seasonal variability of measles transmission, 117:155
Differential equations, functional, reduction of structured population models to threshold-type delay equations and, 113:2
Diffusion
  at first-passage and last-exit times, conditioning, 116:45
  slow intracellular, extending the multiple indicator dilution method to include, 113:211
Diffusional interactions, simple, between macromolecules and between macromolecules and surfaces, an idealized dynamical model of, 114:173
Disease, endemic, effect of age-dependent host mortality on the dynamics of, 114:29
Dose rate, extension of generalized state-vector model of radiation carcinogenesis to consideration of, 115:123
Drug therapy for HIV, conditioning a diffusion at first-passage and last-exit times, and a mirage arising in, 116:45

Eikonal model for spreading of excitation in 3-D models of anisotropic cardiac

tissue, validation of, 113:145
Entry flow, on axisymmetric, at very low Reynolds numbers, 113:245
Epidemic(s)
of acute infectious agents, estimation of vaccine efficacy from, under vaccine-related heterogeneity, 117:271
the "deterministic simple," unmasked, 117:147
Maki-Thompson, on the duration of a, 117:211
Epidemic model(s)
the correlation structure of, 117:49
discrete-time, large deviations for, 117:197
with fatal risk, 117:127
multitype, a threshold limit theorem for, 117:3
parametric inference for, 117:239
Epidemiological model for HIV/AIDS with proportional recruitment, 118:181
Extinction
in predator–prey models with time delay, 118:197
waves of, from sterile insect release, 116:221

Genes, linked, application of Markov chains to, 114:1
Genotypic selection in application of Markov chains to linked genes with interference, 114:1
Growth inhibitory factor in multicell spheroids, on the concentration profile of, 115:233
Growth-production decoupling, nonlinear control of biotechnological processes with, 116:21

Helminthic infections, eradication of, 117:179
Heterogeneous response, the distribution of vaccine protection under, 116:111
HIV, a mirage arising in drug therapy for, 116:45
HIV/AIDS, an epidemiological model for, with proportional recruitment, 118:181
HIV/AIDS epidemic, a review and synthesis of, as a multistage process, 117:19
HIV/AIDS model, an improved hybrid, geared to specific public health data and decision making, 117:221
HIV epidemic and HIV infection distribution in a homosexual population, a stochastic model of, 113:115
HIV infection in $CD4^+$ T cells, dynamics of, 114:81
HIV infectivity, variable, effects of, 117:35
Hodgkin-Huxley model
estimation of steady-state characteristics of, from voltage-clamp data, 115:145
the interpretation of voltage-clamp data using, 115:65
Hormesis, a stochastic model of, 116:197
Host mortality, age-dependent, effect on the dynamics of an endemic disease, 114:29

Insects, sterile, waves of extinction from release of, 116:221
Interneurons, control of somatic motor neurons by, 118:51

Latent time distributions and their properties in a stochastic model of radiation carcinogenesis, 113:51
Ligand–receptor binding, fluctuations in the mass-action model for, 114:127
Locomotion of nematodes, theory of: Control of the somatic motor neurons by interneurons, 118:51
Lotka-Volterra systems, n-dimensional, global behavior of, 113:231

Macromolecules
an idealized dynamical model of simple diffusional interactions between, 114:173
and surfaces, an idealized dynamical model of simple diffusional interactions between, 114:173
Maki-Thompson epidemic, on the duration of a, 117:211
Markov chains, application of, to linked genes with interference, II, Genotypic selection, 114:1
Markov model, three-state, of *Plasmodium falciparum* parasitemia, 117:283
Mass-action model for ligand–receptor binding, fluctuations in, 114:127
Mathematical modeling
of T-cell proliferation, 115:187
See also Volume 117

Mixing patterns, sexual, 115:33
Model(s)
age-dependent two-sex demographic, formulation and computer implementation of, 118:211
of anisotropic cardiac tissue, 3-D, spreading of excitation in, 113:145
central core, of the renal medulla, distributed solute and water reabsorption in, 116:169
deterministic and stochastic, for the seasonal variability of measles transmission, 117:155
discrete metapopulation, analysis of, 118:25
eikonal, validation of, 113:145
epidemic, *See* Epidemic models
epidemiological, *See* Epidemiological models
generalized state-vector, of radiation carcinogenesis, extension to consideration of dose rate, 115:123
Hodgkin-Huxley, *See* Hodgkin-Huxley model
idealized dynamical, of simple diffusional interactions between macromolecules and between macromolecules and surfaces, 114:173
mass-action, for ligand-receptor binding, fluctuations in, 114:127
of phagosome motion within cells based on cytomagnetometric measurements, 118:97
predator–prey, *See* Predator–prey models
stochastic, *See* Stochastic models
structured population, reduction of, to threshold-type delay equations and functional differential equations, 113:1
a three-state Markov, of *Plasmodium falciparum* parasitemia, 117:283
of tissue growth, a qualitative analysis of some, 113:77
Motor neurons, somatic, control by interneurons, 118:51
Multicell spheroids, on the concentration profile of a growth inhibitory factor in, 115:233
multiple indicator dilution method, extending, to include slow intracellular diffusion, 113:211
Muscles, antagonistic, cocontraction of pairs of: Analytical solution for planar static nonlinear optimization approaches, 118:83
Myoglobin, role of, in retarding oxygen depletion in skeletal muscle, 116:1

Nematodes, theory of the locomotion of, 118:51
Neural equation, modified, with stability analysis, in mathematical description and computer simulation of retinal cometlike afterimages, 114:215
Nonaxisymmetric entry flow at very low Reynolds numbers, 113:245
Nonlinear optimization approaches, planar static, analytical solution for, 118:83
Nonparametric back-projection, smoothed, of AIDS incidence data with adjustment for therapy, 118:1

Oxygen depletion in skeletal muscle, the role of myoglobin in retarding, 116:1
Oxygen transport in capillaries, effect of red blood cell shape on, 116:89

Parametric inference for epidemic models, 117:239
Parasitemia, *Plasmodium falciparum*, a three-state Markov model of, 117:283
Passive properties in an idealized bullfrog atrial trabeculum, simulations of, 116:127
Permanence, the probability of, 113:1
Phagosome motion within cells, a model of, based on cytomagnetometric measurements, 118:97
Photoradiation, high-dose-rate, temperature rise in tumor tissue during, 114:135
Population dynamics, local, does migration stabilize? Analysis of a discrete metapopulation model, 118:25

Population models, structured, reduction of, to threshold-type delay equations and functional differential equations, 113:1
Predator–prey ecosystem model, periodically forced, chaos in, 113:91
Predator–prey models with time delay, extinction in, 118:197
Probability of permanence, 113:1
Public health data, specific, an improved hybrid HIV/AIDS model geared to, 117:221

Radiation carcinogenesis
  generalized state-vector model of, extension to consideration of dose rate, 115:123
  stochastic model of, 113:51
Red blood cell shape, effect of, on oxygen transport in capillaries, 116:89
Renal medulla, central core model of, distributed solute and water reabsorption in, 116:169
Reproduction ratio, the basic, for sexually transmitted diseases, Part 2. Effects of variable HIV infectivity, 117:35
Resources, two perfectly substitutable, exploitative competition in the chemostat for, 118:127
Respiratory system, mathematical study of periodic breathing as an instability of, 114:149
Retinal cometlike afterimages, mathematical description and computer simulation of: A modified neural equation with stability analysis, 114:215

Sexually transmitted diseases, the basic reproduction ratio for, Part 2. Effects of variable HIV infectivity, 117:35
Sexual mixing patterns, assessment, 115:33
SIS model, closed; stochastic SI model with recruitment and deaths. I. Comparison with, 117:77
SOFTWARE REVIEW: Janssen, Peter H. M., @RISK; Risk Analysis and Simulation Add-In for Spreadsheets, version 2.01 for Lotus 1-2-3; version 1.1 for Microsoft Excel, 118:241
SOFTWARE REVIEW: Novelli, Paul, CoHort for IBM PC, 115:245 Stability analysis, a modified neural equation with, in mathematical description and computer simulation of retinal cometlike afterimages, 114:215
Stability of generalized wave gaits, a study of, 115:1
State-vector model of radiation carcinogenesis, generalized, extension to consideration of dose rate, 115:123
